

MP14 NEEDLE HEAD

M3 TECHSHEET / NEEDLE HEAD SERIES

M3 INJECTOR SERIES

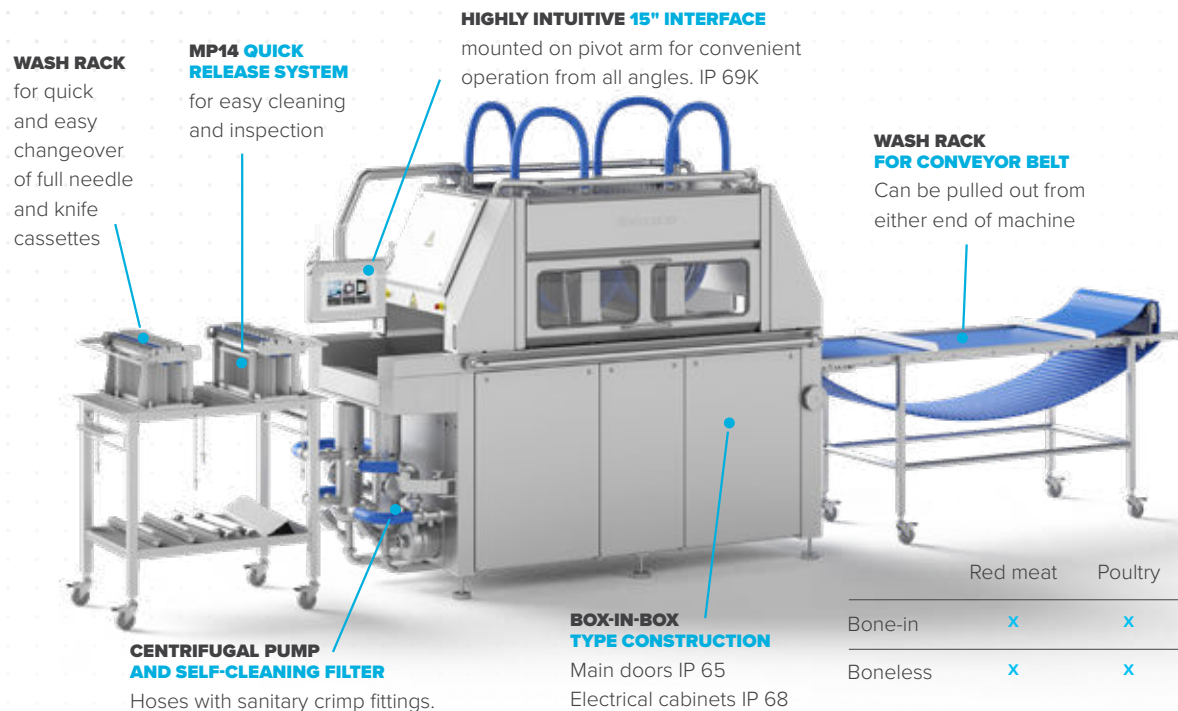

THE FOMACO MP14

NEEDLE HEAD

With a stroke height of 0-240 mm, a max product clearance of 200 mm and a design for both bone-in and boneless meat products the MP14 is the most flexible needle head in the M3 range.

Due to the dual pressure air cylinders the stripper feet can apply low pressure to the product on the downstroke and an increased pressure on the upstroke. Because the stripper feet have an exceptional hold on the product the injection is controlled on both the downstroke and on the upstroke, making the MP14 extremely precise.

Moreover, the needle head can be equipped with differential injection allowing for an optimized production of full middles or back bacon. This, combined with the numerous needle options and the ability to quickly change the full needle cassette, makes the MP14 adaptable to all production requirements.

	Red meat	Poultry	Fish
Bone-in	X	X	
Boneless	X	X	

DESIGNED FOR QUICK AND EASY CLEANING

With the MP14 quick release system you can dismantle the full needle cassette in a matter of seconds. Inspection, cleaning and disinfection have never been easier!

This also allows for an instant exchange with a clean needle cassette.

In addition, the needle head features:

- A self-cleaning seat valve design
- Pump-to-product system for improved hygiene
- A wash table for all loose parts during cleaning
- A self-cleaning brine distribution channel for improved hygiene

TECHNICAL SPECIFICATIONS

Advancement: 30-45-60 mm
Stripping heights H1: 0-200 mm

Available needle types: Single - Double - Quadro

Injection area W1 x L1		Number of needles	
FGM 48	420 x (60) mm	FGM 48	48 pcs
FGM 64	550 x (60) mm	FGM 64	64 pcs
FGM 88	750 x (60) mm	FGM 88	88 pcs
FGM 112	950 x (60) mm	FGM 112	112 pcs

Compatibility

FGM 48 / FGM 64 / FGM 88 / FGM 112

ADDITIONAL FEATURES

- Reduction in wear parts on needle head
- Uniform needle pattern
- Product activated brine valves
